

# WiFi4EU—Bringing Europe Closer Together

The European Commission has recently launched an initiative called WiFi4EU that seeks to bring free Wi-Fi connectivity to Europe. Publicly accessible Wi-Fi will come in the form of hotspots found in public sector bodies such as local municipalities, libraries, or parks. The EC is currently searching for local public authorities that would like to join the initiative and to offer Wi-Fi connectivity in locations that lack it.

## Stay in the Loop
