

LigoBASE 5-N/5-90

High-performance 5 GHz base-station

Available models

LigoBASE 5-N

Base-station with N-type connectors for the external

LigoBASE 5-90

Base-station with and integrated 17 dBi 90 degree sector antenna.

Incredible performance

LigoPTMP series point to multipoint system delivers 600+ Mbps throughput via its unique and powerful RF design that supports up to 256QAM modulation and 31 dBm output power. 1.2 GHz dedicated CPU ensures swift data processing and high packet per second rate (PPS) which is important for real time data transmission applications. Equipped with two Gigabit Ethernet ports, one with PoE passthrough, the unit allows powering and connecting two devices on the tower (another LigoBASE or IP camera). LigoBASE incorporates integrated surge and ESD protection according to IEC standards passing Class 4 requirements. Additionally, weatherproof IP-67 standard rated enclosure design allows using the equipment in any climate conditions.

LigoWave OS

The full featured operating system makes LigoPTMP devices ideal not only for WISPs and operators, but also for security, enterprise or industrial applications. Proprietary data transmission protocol (W-Jet V) ensures smooth performance even in noisy areas at the same time delivering high capacity, low latency and high packet per second rate. QoS (quality of service) mechanism allows prioritizing mission critical data and efficiently transmitting voice, video or other real time data over the wireless network. Essential tools like spectrum analyzer, site survey, antenna alignment and others are included.

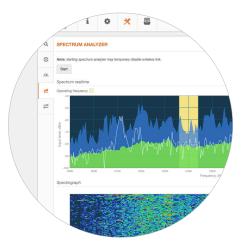

Easy pre-configuration and maintenance

A new approach to setting up and maintaining your network

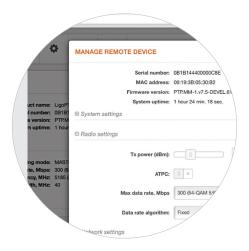

Setup Wizard

Guides the installer through the important steps of the set-up process.

Spectrum analyzer

Demonstrates the current noise floor in a waveform and waterfall graphs.

Single side configuration

Link parameters are automatically applied to subscriber units once set on the base-station side.

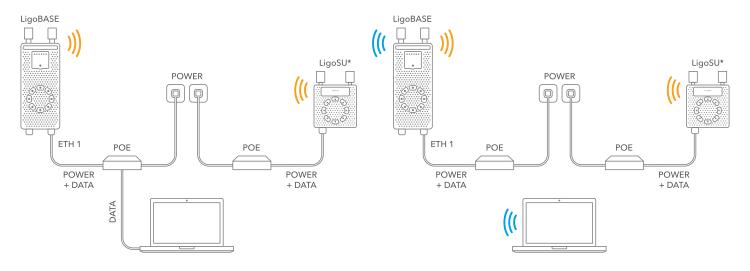

2.4 GHz access radio

An internal 2.4 GHz radio allows access into the LigoBASE GUI by wireless connection with any WIFI equipped device.

Pre-configuration

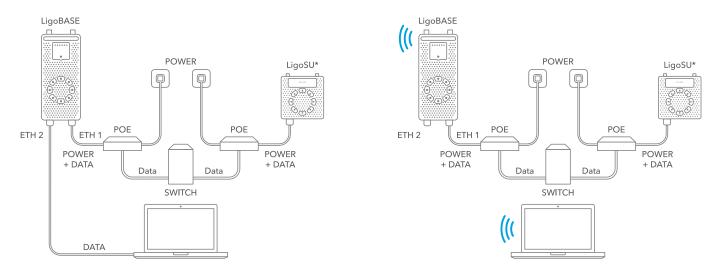

Multiple options to pre-configure LigoPTMP devices are displayed in a scheme below. Devices can be connected with each other using wired or wireless connectivity. End-user device can also connect to the LigoBASE device using 2.4 GHz access radio or using wire to the Ethernet port of the LigoBASE device. LigoPTMP devices can be discovered using Bonjour, CDP and SSDP protocols as well.
