FCC Warning

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution

To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

FCC Radiation Exposure Statement

To comply with FCC RF exposure requirements in section 1.1307, a minimum separation distance of 3.9 feet is required between the antenna and all occupational persons, and a minimum separation distance of 8.7 feet is required between the antenna and all public persons.

Antenna Installation

WARNING: It is installer's responsibility to ensure that when using the authorized antennas in the United States (or where FCC rules apply), only those antennas certified with the product are used. The use of any antenna other than those certified with the product is expressly forbidden in accordance to FCC rules CFR47 part 15.204. The installer should configure the output power level of antennas, according to country regulations and per antenna type. Professional installation is required of equipment with connectors to ensure compliance with health and safety issues.

FCC Antenna Compliance

The LigoMesh Quad has been tested and certified with the following antennas:

5.725-5.825 GHz

Type	Gain (dBi)	Power	EIRP	Operation Mode
Dish	32.5	26	58.5	PTP
Grid	27	26	53	PTP
Panel	23	26	49	PTP
Omni	12	24	36	PTMP

4.9GHz

Type	Gain (dBi)	Power	EIRP	Operation Mode
Panel	23	26	49	PTP

2.4GHz

Type	Gain (dBi)	Power	EIRP	Operation Mode
Grid	24	24	48	PTP
Panel	19	25	44	PTP
Omni	12	24	36	PTMP

Any antenna of same make and lower gain than those listed above may be used in compliance with certification.

The maximum FCC EIRP limits are listed above with given antennas. In order to use above antennas, transmitter power settings may need to be adjusted in software to meet given EIRP limits

CE Mark Warning

This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

R&TTE Compliance Statement

This equipment complies with all the requirements of the Directive 1999/5/EC of the European Parliament and the Council of 9 March 1999 on Radio Equipment and Telecommunication Terminal Equipment and the Mutual Recognition of their Conformity (R&TTE).

The R&TTE Directive repeals and replaces in the directive 98/13/EEC (Telecommunications Terminal Equipment and Satellite Earth Station Equipment) As of April 8, 2000.

Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this manual and of the computer manufacturer must therefore be allowed at all times to ensure the safe use of the equipment.

EU Countries Intended for Use

The ETSI version of this device is intended for home and office use in Austria, Belgium, Denmark, Finland, France (with Frequency channel restrictions), Germany, Greece, Ireland, Italy, Luxembourg, The Netherlands, Portugal, Spain, Sweden and United Kingdom.

The ETSI version of this device is also authorized for use in EFTA member states Iceland, Liechtenstein, Norway and Switzerland.

EU Countries Not Intended for Use

None.

About This Guide

Purpose

The purpose of this guide is to provide a quick and easy explanation of getting started with the LigoMesh Quad. This is only a starter guide and full documentation may be found at our online wiki: <http://www.ligowave.com/wiki>

Definitions, Acronyms and Abbreviations

The following typographic conventions and symbols are used throughout this document:

Additional information that may be helpful but which is not required.

Important information that should be observed.

LigoWave Technical Support

If you encounter problems when installing or using this product, please consult the LigoWave website at www.ligowave.com for:

- Direct contact to the LigoWave support centers.
- Frequently Asked Questions (FAQ).
- Download area for the latest software, user documentation and product updates.

Installation

This chapter provides installation instructions for the hardware and software components of the LigoMesh Quad. It also includes the procedures for the following tasks:

- Hardware Introduction (LEDs, Connectors)
- Connecting the device

Package Contents

The LigoMesh Quad comes with the following:

Component Name	Quantity
Mounting Bracket	1
CAT5 Connector Cap	1
Integrated 48V PoE Power Supply & Injector	1
$\frac{3}{4}$ " Screws	6
Dual-Band Omnidirection antennas (2.4GHz – 4.5dBi, 5.8GHz – 7dBi)	4

If any of these items are missing or damaged, please contact your reseller or LigoWave sales representative.

Hardware Introduction

General Overview

The LigoMesh Quad is housed in an aluminum enclosure and includes four N-Female type antenna connectors for use with external antennas.

The bottom panel of the LigoMesh Quad contains:

- **Data/Power connection** in the form of passive PoE through standard Ethernet cable
- **N-Female** type antenna connector

The bottom panel of the LigoMesh Quad contains:

- **N-Female** type antenna connector

The label of the LigoMesh Quad contains:

- **Model** name. The official model name is **LigoMesh Quad**.
- **FCC ID**. This unit contains FCC ID V2V-WMR400

Connectors

The LigoMesh Quad has several connectors on the bottom, top, and side panels.

Descriptions of the connectors are given in the following table:

Connector	Description
PoE	For insertion of power and data through Ethernet cable using passive PoE
Antenna	External antenna connectors (type N-Female)

Antenna Connector Layout

The LigoMesh Quad has four n-female type connectors. The connectors correspond to the radios as follows:

Access the LigoMesh Quad

The first connection to the LigoMesh Quad can be made using a standard Ethernet cable connected directly to your PC. See next sections for the instructions on how to access the LigoMesh Quad management interfaces.

Connection via WEB browser

The default IP address of the LigoMesh Quad is 192.168.2.66 with a subnet mask of 255.255.255.0.

- Step 1** Configure your PC with a static IP address on the 192.168.2.0 subnet with mask 255.255.255.0. Connect the LigoMesh Quad Ethernet interface in to the same physical network as your PC. Open the Web browser and type the default IP address of the LigoMesh Quad: <https://192.168.2.66/>

- Step 2** Enter the LigoMesh Quad administrator login details to access the Web management:

The default administrator login settings for all LigoMesh Quad are:
User Name: **admin**
Password: **admin01**

- Step 3** After successful administrator log on you will see the main page of the LigoMesh Quad Web management interface. The LigoMesh Quad now is ready for configuration. For further instructions on Web management refer to the respective document at the LigoWave wiki at <http://www.ligowave.com/wiki>

Resetting to Factory Defaults

LigoWave products have the capability of being reset to defaults by pinging the device with a certain packet size when the radio is booting.

During the startup of the device, when the drivers of the ethernet interfaces are loaded, the discovery daemon is started. The daemon suspends startup process for 3 seconds and waits for ICMP *"echo request"* packet of length 369 bytes. If the packet received, the discoveryd resets the device to default configuration.

Steps to reset to default settings:

Step 1. Power off the device.

Step 2. Obtain the device MAC address.

Step 3. Connect a PC to the same physical subnet as the device.

Step 4. Execute 'arp -s' command to assign the IP address (IP address should be from the same subnet as PC) to the device MAC address:

```
arp -s <IP address to assign> <device MAC address>
```

Step 5. Start pinging the device:

For linux users:

```
ping <IP address> -s 369
```

For Windows users:

```
ping <IP address> -l 369 -t -w 0.2
```

Step 6. Power up device and wait about 30sec or more (depends from device hardware).
